We successfully completed the sampling of all drinking fountains, kitchen sinks, and ice makers for floors 7 to 13 and 18 today. Thanks to our ace team of OEA volunteers; Elizabeth Allen, Chris Eckley, and Donald Brown who were here at 5:30 this morning, we were able to have all the sampling points collected and water available by 7:00 am.

All of the fixtures were intact – meaning none of the signs were removed nor was there any evidence of water running in the fixtures since I placed the signs last night about 8:00 pm. I have sent a note to Washington Holding and GSA thanking Park Place staff and contractors for their cooperation. Toni Carroll with Washington Holdings met us here at 5:30 am to see if we needed anything, but she did not accompany us on the sampling rounds.

We expect to have the results back from the Manchester Lab in approximately 3 weeks. We will notify each of you when the results are back and have cleared QA. After that, the results will be posted on the InfoPage. Based on the results we can discuss next steps.

Let me know if you have any questions.

Thanks
Mark
